AG 4989N LL is a new high yielding late group IV variety from Advanced Genetics with the Liberty Link trait. This variety features a very attractive field appearance and terrific yield potential. Even though it is a tall variety, standability is very good and AG 4989N LL may be planted on any soil type, drilled or rowed, and with great flexibility in respect to planting date. This variety may be planted anywhere late group IV varieties are adapted with the expectation of great performance.
